Focus on Your Business, Not Invoices.

Cloud Age helps businesses solve complex invoice and cost management challenges with a comprehensive suite of automation solutions.

- ✓ InvoiceIQ Retrieval Services
- ✓ InvoiceIQ Reader Services
- ✓ UNI-Bill™
- ✓ Super-USOC™

What is InvoiceIQ?

InvoiceIQ Services are Cloud Age's high-performance suite of automated invoice processing and data normalization tools containing one of the largest library of telecom invoice readers in the industry. InvoiceIQ's functionality automates the invoice data retrieval, reading, translation, and normalization of vendor invoices in nearly any format helping to ensure timeliness, completeness, and accuracy.

<48 Hrs

All invoices are processed in less than 48 hours (98% within seconds)—no matter what format.

100%

100% of all invoices are checked for missing or incomplete data.

1

Each customer's invoices are consolidated into 1 easy to read, easy to understand UNI-Bill file.

InvoiceIQ Retrieval Services

InvoiceIQ Retrieval Service provides automated carrier portal downloads and Electronic Data Interchange (EDI) data retrieval technology to standardize data retrieval from IT and Telecom Providers. This service reduces the employee resource costs of managing invoice intake, while improving the accuracy and timeliness of vendors' monthly invoices.

InvoiceIQ Reader Services

InvoiceIQ Reader Service maps each incoming IT and Telecom Provider invoice using proprietary automated invoice readers to convert unstructured data from EDI, PDF, and web-based electronic formats into standardized data file formats (CSV and Excel). We constantly update our Readers to adjust to Provider changes to improve the timeliness, completeness, and accuracy of data for use in invoice processing, validation, and decision-making.

UNI-Bill™

UNI-Bill is a standardized, normalized, and easy-to-analyze text based or Excel data export format we provide to our clients. UNI-Bill data export is the result of InvoiceIQ Reader Service using our proprietary invoice reader library and data translation technology. UNI-Bill helps companies enhance the automation of their invoice processing, cost validation and accounting processes.

Super-USOC™

Super-USOC Service provides a descriptive charge code that adds data elements at the service level to each billed service item enabling better utilization of the data. Every Telecom Provider has their own unique product descriptions that make it challenging to compare pricing, optimize network inventory, and find potential savings. Super-USOC Service enhances Providers' invoice data to make it more usable for decision-making.

Cloud Age provides Service Providers, TEMs, and Enterprises with powerful telecom focused Data and SaaS solutions to eliminate complexity, automate data-intensive manual processes and deliver insights that drive efficiencies across the service lifecycle.

Products & Solutions

gpxcloud Platform

SaaS solution for lifecycle management, cost audits, GL assignments, invoice processing, and system integrations.

InvoiceIQ Retrieval Services

Automated IT/Telecom PDF portal downloads and EDI data capture.

InvoiceIQ Reader Services

Automated IT/Telecom invoice data readers to translate all invoice information.
